# Table of Contents

Preface .......................................................................................................................... 1  
1 – Introduction ............................................................................................................. 3  
2 – Worldwide cost of substance abuse, and relevant mortality and disease data .......................................................................................................................... 7  
  2.1 – Basis for cost .................................................................................................... 7  
  2.2 – Death statistics ............................................................................................... 9  
  2.3 – Disease burden statistics ............................................................................ 10  
  2.4 – Projections of mortality ............................................................................. 12  
  2.5 – Resilience of denial about substance abuse as a condition ..... 14  
  2.6 – Incalculable costs ....................................................................................... 15  
3 – Psychotherapy as a subset of community ............................................................ 17  
  3.1 – Suppression .................................................................................................... 17  
  3.2 – Community direct substance abuse services, introduction to seduction ......................................................................................................................... 19  
  3.3 – Ovid – Echo and Narcissus .......................................................................... 24  
  3.4 – Narcissistic (anger-guilt-shame) versus depression (shame-anger-guilt) ......................................................................................................................... 25  
4 – Development of thought from 1800 to 1960 ....................................................... 27  
  4.1 – Modern psychology’s knowledge base ......................................................... 27  
  4.2 – Modern psychology and ‘mind’ and ‘free will’ ......................................... 49  
  4.3 – Modern psychology’s interrelationships ....................................................... 49  
  4.4 – Time-independent categorical constructs important to ‘mind’ and ‘free will’ ................................................................................................................ 52  
  4.5 – Humanism .................................................................................................... 54  
5 – Narrow-minded focus of cognitive psychology and evidence-based practices is wrong ................................................................................................................. 59  
  5.1 – Albert Einstein and peace .......................................................................... 59  
  5.2 – Human thought with ‘free will’ the superset of ‘mind’ ......................... 61  
  5.3 – The evolution of the anti-Freud rhetoric ...................................................... 66  
  5.4 – The many layers of psychic to be accounted for .................................... 70
5.5 – The narrow assertions of the cognitive psychology ‘revolution’ 72
5.6 – Dubious findings of the cognitive psychology ‘revolution’ 75
5.7 – Ethics, professionalism and responsibility 79
5.8 – Influential persons in the last 100 years 83
5.9 – Breuer’s Anna O case versus pharmaceuticals and short-term psychotherapy 85
5.10 – Theory developed in the last 100 years 87
5.11 – Four Nobel Laureates and one dishwasher 94
6 – Centrist focus of cognitive psychology and evidence-based practices is needed 97
   6.1 - Responsibility to diverse duties 100
   6.2 – Cognitive psychology – overt focus on everyday life 101
   6.3 – Cognitive psychology – align everyday life to entrenched disorders 104
   6.4 – Cognitive psychology – extend everyday life to entrenched disorders 106
   6.5 – Evidence-based – address volunteer bias 108
   6.6 – Evidence-based – approach active therapists with details of study 108
   6.7 – Evidence-based – subject selection to be broad 112
   6.8 – Integrity – creativity, grit 113
   6.9 – Integrity – survey therapists versus laboratory studies 114
   6.10 – Integrity – project appeal to the student community 114
7 – Pathogenesis of addiction and centrist cognitive psychology and evidence-based practices 117
   7.1 – Varied constructs as basis of pathogenesis of addiction 121
   7.2 – Pathogenesis of addiction void of undercurrents 127
   7.3 – Pathogenesis of addiction, overt assumptions about manifestation 128
   7.4 – Pathogenesis of addiction, latent regression as basis of manifestation 129
   7.5 – Pathogenesis of addiction, latent progression as basis of manifestation 130
   7.6 – Defuse pathogenesis of addiction, less emphasis on regression,
more emphasis on progression ........................................ 132

8 – Concepts that support mainstream services that are intended to address substance abuse .............................................................. 135
  8.1 – Seduction revisited .................................................. 135
  8.2 – Overt and covert representations of each narcissistic, depression and repression .......................................................... 138
  8.3 – Resolve psychoanalysis to psychotherapy with a mathematical representation the basis .................................................. 138

9 – Mainstream substance abuse treatment services as a subset of community .................................................................................. 141
  9.1 – Suicide, depression, addiction and burnout ....................... 141
  9.2 – Realistic extrovert-introvert representation of community .... 143
  9.3 – Big Five oriented definition of denial .................................. 144
  9.4 – Primary care physician .................................................... 145

References .............................................................................. 151
Index ....................................................................................... 179

Table of Equations

Equation 1 - Chronic, behavior .................................................. 22
Equation 2 - Acute, behavior ....................................................... 23
Equation 3 - Chronic, thought .................................................... 64
Equation 4 - Dynamic, thought .................................................... 64
Equation 5 - Acute, thought ....................................................... 64
Equation 6 - Memory ................................................................. 64
Equation 7 - Exponential decay ................................................... 148

Table of Figures

Figure 1 - Alcohol consumption ............................................. 5
Figure 2- Age-standardized disability- adjusted life years lost (DALY) .... 6
Figure 3 - Ischemic heart disease causal chain .......................... 13
Figure 4 - Mental activity ......................................................... 21
Figure 5 - Community ............................................................. 22
Figure 6 - Seduction circa DSM-II ......................................................... 23
Figure 7 - Interrelationships ................................................................. 52
Figure 8 - Source, aim, object................................................................. 62
Figure 9 - Formation of thought............................................................. 63
Figure 10 - Percent of suicides by age group ........................................ 82
Figure 11 - Everyday life ........................................................................ 98
Figure 12 - Age distribution of consumption of alcohol ....................... 120
Figure 13 - Causal chain ...................................................................... 120
Figure 14 - Seduction circa 1900 ............................................................ 137
Figure 15 - Momentary acute ................................................................. 139
Figure 16 - Burnout vs. depersonalization ........................................... 143
Figure 17 - Community ........................................................................ 144
Figure 18 - Denial ................................................................................ 145
Figure 19 - Exponential decay ............................................................... 148

Table of Tables

Table 1 - Death statistics .................................................................... 9
Table 2 - Disease burden ................................................................. 10
Table 3 - Projections of mortality ...................................................... 12
Table 4 - Needed/ received treatment .............................................. 14
Table 5 – Visionaries ......................................................................... 29
Table 6 - Freud circa 1900 vs. circa 2000 ....................................... 125
Table 7 - Selected DALY data .......................................................... 130
